

LE KHAC DUY ANH | [lekhacluyanh@gmail.com](mailto:lekhacluyanh@gmail.com) | [0906789832](tel:0906789832)

Interested in productivity, ergonomic design, and humankind, specializing in web tech and UI/UX.

Current stacks:

- JavaScript, MongoDB, NodeJS, Shopify Liquid
- AWS, Firebase, GCloud, Heroku,

**Experienced: C#, Flash, Microsoft Crytal Reports, Microsoft SQL Server, PHP, PostgreSQL, ReactJS**

## LEADERSHIP EXPERIENCE

### ECM 2020–Now

Working with various domain specialists to deliver successful sales campaigns.

- Optimize for the Shopify site
- Design and build
  - Color swatch
  - Filters
  - Custom variant display on product
  - App to create home-decors prints
  - Orders and Fulfillment automation task runner
  - SVG editor (like Adobe Illustrator) for designers & non-designers
- Configure and integrate with external systems

## FRONTEND SOFTWARE DEVELOPMENT EXPERIENCE

### Noggin AI (Remote) 2019–2020

Worked as a full-stack senior developer, heavily on the front end. The goal at that time was to create systems that allowed:

- Noggin's admins to observe the system's status and manage AI models.
- Noggin's users create and deploy consent forms to their client's websites.

### ShopBack VN 2017–2019

Worked as a full-stack developer; the goal was to build tools that helped the company run well.

- React and Redux are "default" at that moment in time.

- The system owners picked NodeJS to replace the old PHP one.
- Applied the Micro-Services design system to have better experiences with other systems.
- Joined the Functional Programming hype train.

### **Intersquad Studio 2016–2017**

Worked as a senior developer, focusing mainly on building software on demand. At this time, many new things come and go. The list of apps is from a range of domains:

- The airline e-ticket system for one big re-seller, but the project failed because of a captcha and a strict bot protection system.
- Smart IOT device to control the light and water for indoor plants. This project had not happened yet, but it was a terrific experiment.
- Custom websites and content management systems using CraftCMS and WordPress for Australian clients (KitchenAid, Accor Hotels).
- Automation scripts that serve many purposes.

### **WinBooks VN 2013–2015**

Worked as a freshman, the main focus was to create anything the system needed to make Accountants happy.

- Managed the works using the Jira dashboard.
- Created File Management module. (first-time used recursion trees data structures in real life).
- Created a reporting module that exports data and generates PDFs using Microsoft Crystal Reports.
- Updated the source code labeled as BUG, then delivered it to production using trunk-based development.

At this moment in time, Winbooks created software that has the following features:

- Run in browser.
- The Windows system can drag and drop like the natural OS system.
- Tons of accounting features.
